A test of Spot's ability to adjust to disturbances as it opens and walks through a door. A person (not shown) drives the robot up to a door. This experiment evaluates the ability of the robot to respond to perturbations. Specifically, one of the experimenters asks, "Why are humans so much better at grabbing things than robots?" This video explains how we can teach machines to handle such situations. The video features a simulation where a mobile robot detects and transports objects, besides it presents a reactive control system. With my background in electromechanical engineering, I developed controllers for humanoid robots to achieve human-like behavior. Guest talk by Sebastien Bubeck on the seminar.
