Tim finds out what happens when you throw a ball while spinning around on a merry-go-round. Why do objects seem deflected in a carousel? Why do hurricanes turn in opposite directions? And why does a train weigh less when it's moving? Two demonstrators sit at either end of a rotating platform and toss a ball back and forth. When viewed from the rest frame (when the platform is not rotating), the ball goes straight. In this third, and final, video in the Global Circulation series we look at how the rotation of the Earth influences our winds through the Coriolis effect. Why do storms spin in different directions depending on their location? And why do they spin in the first place? pbs.org/nova/labs. Does your toilet water drain differently
