You're all familiar with this issue. When you get out of a hot shower, the bathroom mirror is all fogged up. It's still So what is the difference between The angle of incidence equals the angle of What the heck does a "virtual" image mean? Does that mean it's just in my imagination? If yes, then am I just imagining this video? Did you know the very internet you're using right now relies on this This video tutorial lesson discusses the difference between So we know we can see images in these curved mirrors, but how exactly do we figure out where the image is located? I would argue that the invention (or discovery) of lenses

is one of the most important milestones in science and technology ever. You know those holiday ornaments that are very shiny spheres? They show you a really small image of yourself. How does that work? ... Okay, we've been talking a lot about lenses that are curved away from us: positive lenses (convex). But what about lenses that are curved towards us: negative lenses (concave). But what about lenses that are flat? ... "The whole purpose of education is to turn mirrors into windows." - Sydney Harris Love that quote. But we're not that educated ... Yeah because the mirror is a lot smoother a lot more of the light gets reflected. You know those reflectors that attached to your bicycle wheel? How do those work?
