Of all of the claims of modern physics, perhaps the most amazing is that for every kind of known matter, there is a cousin version. Einstein's equation $E = mc^2$ and the theory of the Big Bang are both generally accepted physics theories and yet, between them, Gravity is the most familiar of the forces and Einstein's theory of general relativity describes it pretty well. However, it fails in the quantum level. To understand the universe, you need to understand the different forces that govern it.
